

The long tarmac drive leading to the garage was an unsightly waste of space and unnecessary walk

THE GARAGE

Foundations dug out - tarmac, rubble, stone

Helping hands

**The old frame was re-erected
on the new garage base**

Asbestos
was replaced
by wooden
shiplap
cladding

A new tool-shed

Then the tarmac went ...

THE DRIVE

... for a new block paved driveway

The tarmac was broken up
and relaid as hardcore

Tegula paving was used

Foundations

Steps

The finished product

An old outhouse was re-roofed

Baskets

We inherited an old
aluminium coated
railway shed which
had been used as a
pigeon loft.

It first became a play
house

THE BIRD SHED

It stayed this way until the children grew up

Then in 1997 it was
time to pull it apart -
saving any of the wood
that was not rotten.

Underneath the
Russian vine had gone
rampant

**A concrete base was laid
The old stone wall revealed at
the rear was repointed**

A framework for the new shed was built from tanalised sheep rails - from a local sawmill at Wrelton

The window is my Mum's old front door

The new shed
has a
greenhouse, a
sitting area and a
tool-shed.

The cladding
was reclaimed
from the old
sheds.

The windows
were made using
2ft square
greenhouse glass

Christmas Project
